INSIDE FOCUS SYSTEM

The telescopic masts can be equipped with our tilt & turn units for the movement of the equipment, designed to offer a lighting that adapts to different emergency situations. The Inside Focus system is a further feature that consists of motorized brackets mounted on the arms of the tilt & turn unit and that allow the focusing or the increasing of the lighting beam angle. All the movements will be controlled by one single multifunction remote control. This system allows you to direct the light beam of the mounted LED lamp units precisely permitting the illumination of different areas, in order to satisfy every type of need.

INSIDE FOCUS SYSTEM SU TILT & TURN SPARK

The Inside Focus System allows you to mount on the tilt and turn unit a motorized lamp unit with LED lights, for increasing or focusing the lighting beam angle (+46°/-4°).
The unit allows you to turn and tilt the floodlights 365°, furthermore you can move the arms -4° and +46° like shown in the pictures.

This will permit you to illuminate a wide area and to direct the lighting beam to the required direction. All the functions of this unit can be controlled by one multifunctional remote control.
